Programmable logic controller

Programmable logic controllers are a very economic and flexible automation solution for machines and plants. We are Siemens Solution Partner and therefore we use the SIMATIC controller. With this kind of controller it is possible for us to find the right solution for all kinds of small automation jobs as well as for high complex system solutions.

Of course, such a drive solution can be combined with a comfortable visualization based on PC's or touch panels. Herewith it is possible to log production data, manage recipes, record shift data and a lot more.

We are always keen to have a close contact to our customers and like to oblige their wishes.
